Hello all my fellow woodworkers!

Just as a reminder to those who were not at the last guild meeting, we have decided that for the rest of this season (April, May, June) we will stay with the online format for our meetings. The intent is that by the fall, most people will be vaccinated and the pandemic situation will have improved enough for us to kick off our 2021-2022 season with a fall picnic in lieu of our usual spring picnic.

For our April Guild meeting we will have Greg Johnson from Carter Products to talk about their products of interest to woodworkers. Greg will focus mostly on bandsaw items and turning tools and accessories.

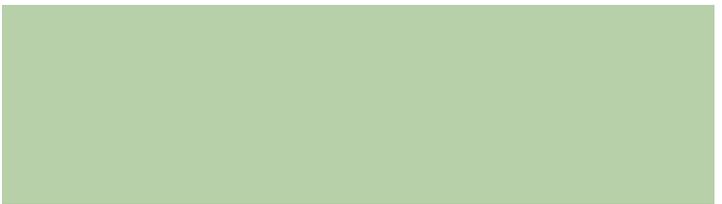

For May's meeting we will have a presentation from a representative from Sawstop.

So until we meet again in person, there is always something to do in the wood shop — or shopping for the wood shop. I expect to see some fantastic show-and-tell this coming fall!

Stay Safe.
-Les

Coming up in April

If you are a woodworker (since you are reading this, you probably are) you have probably heard of Carter Products. Carter Products holds a special place for those of use from West Michigan since they are based in Grand Rapids. Carter doesn't make power tools — they make power tools better. Their band saw guides are considered some of the best the world has to offer and we are excited to have Greg Johnson talk to us at our April meeting about their products.

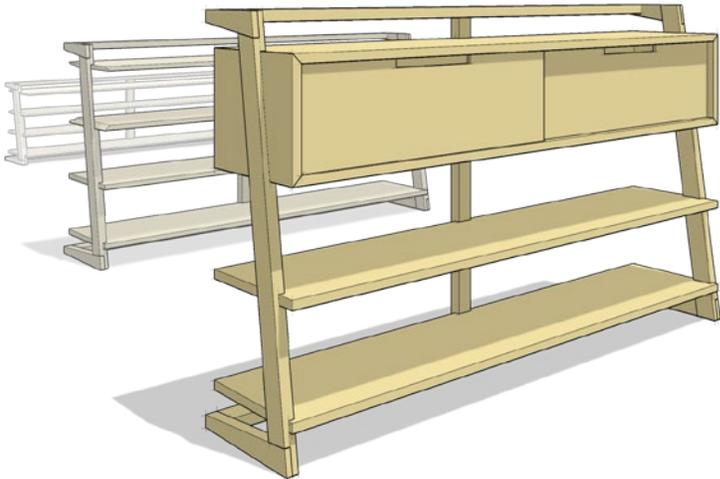

March meeting recap

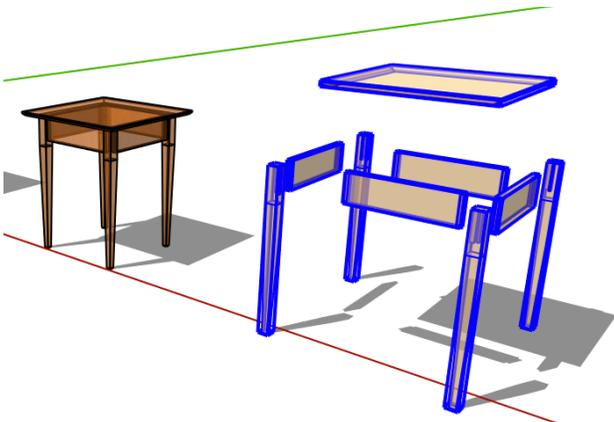

by Steve DeVries
presentation by Chris Taylor

I know SketchUp gets mentioned a lot when talking about woodworking, and no doubt some of you are tired of hearing about it or think it is only for the generation of tech-savvy young'uns. No doubt some of the woodworkers in the late 1800's saw this new-fangled invention called the "drill press" and thought the same thing, but we now accept the drill press as an essential tool.

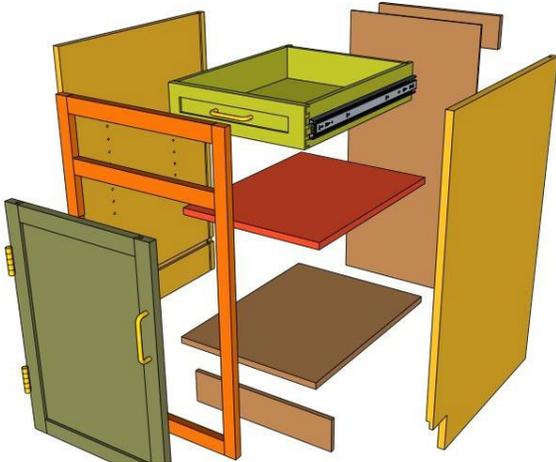

You don't have to use SketchUp, but learning another tool is always a good thing.

Digital pre-assembly

Exploding projects down to their individual components

Project phasing and sub-assembly

X-ray mode can help to look at joints, part interfaces, and design problems

Cool tools

by Steve DeVries

I do not have Dale Smith's oratorical flair or know anywhere near the amount of different tools available on the market, but there are a few things that I use on a regular basis that I have found to be very helpful.

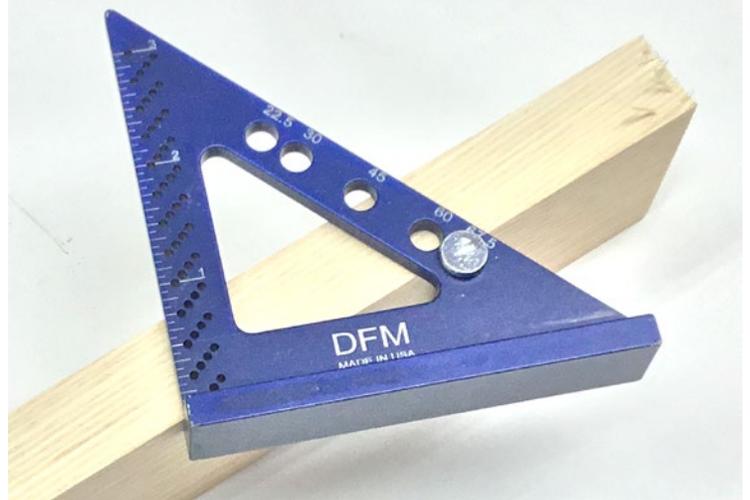

DFM's dowel plate has holes for every $1/32$ " from $5/8$ " down to $1/8$ " in diameter — better than most you will find. I use this draw plate to accurately size dowels of even exotic hardwoods for model building. I built the wood block to hold it so I had a large cavity underneath.

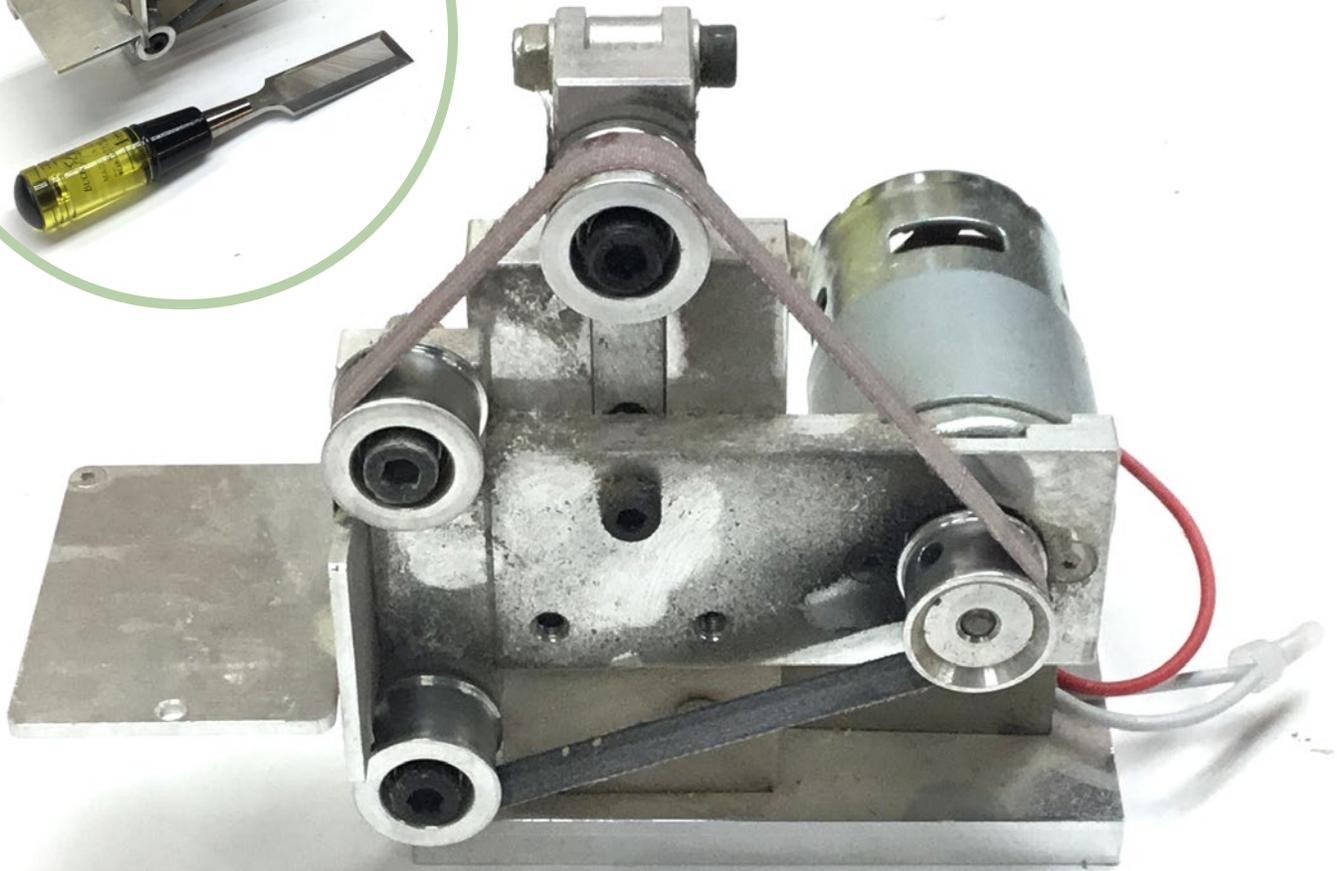

Miniature square — in addition to being great for model building due to its size, using the provided metal pins also allows it to be used as a center finder.

Please note : DFM Toolworks is not paying me or contacted me in any way. I have bought a few of their tools and just really like them.

Lots of companies make speed squares. I like this one by DFM because it has holes every $1/16$ ", includes metal pins so that you can angles other than 45° , and is small enough to put in your pocket. Even though small, it is large enough that you can use it on 2x4's.

Miniature belt sander. Sometimes even a small 1" wide belt sander is just too much power for the small parts I make when model building. I found this small sander on Amazon, and honestly, I thought to myself, "Really? Just how good can a \$50 mini belt sander from China be?" I have had bad experiences with Chinese tools before, but I decided to risk it.

Let me tell you : **This is not a piece of junk.** Someone took real pride in their work. There is no plastic on this tool, it is all made from machined aluminum and uses metal bearings. The belt tension and tracking is fully adjustable, and the switch allows it to be run at five different speeds. I use this all the time on small parts and precision work. It uses a standard sized belt that is easy to find.

I recently discovered the Dado tool. Brand names go by "The Kerfmaster" but I bought a generic one. This little tool allows you to perfectly size rabbets and dado's regardless of what type of blade you are using. No more need for a Dado stack (which I don't own anyway). The nice thing is that I can even use this on my small hobby table saw. Well worth the money.

How to access ZOOM

Zoom for newbies

To participate in virtual meetings you'll need to download the FREE Zoom software.

Desktop and laptop computer users should go online to zoom.us, join as a free basic member by entering your email and a password, and look under the "resources" tab for the download. Smartphone users, go to your app store for "zoom cloud computing." There are many concise videos on line showing you how to install and start Zoom.

Joining the meeting. When you receive an invitation in your email, just look for the Zoom link to join meeting, and click it.

Full screen. In the meeting, look in the upper right corner of your screen and click "enter full screen," to see the biggest picture.

Views. Also in the upper left, you'll see either "Speaker View" or "Gallery View," click to switch. In Gallery View, you see Hollywood Squares. In Speaker View, the person talking fills your screen. You can switch back and forth.

Mute/Unmute. Look in the lower left corner of your screen for a wee microphone, here you can Mute your sound, and Unmute. Switch back and forth to see how it works; in many setups, the space bar acts as a "press to talk" switch.

Smartphones will show a bigger better picture if you turn them sideways.

More Zoom controls appear as icons on the bottom of the screen. You can experiment with them.

Exit. Click "Leave the Meeting," in red at lower right, to end the session.

See you at the virtual meeting!
